

Child and Youth Program Participant Immunization and Life Threatening Health Conditions

The Board directs the Superintendent to require children and youth referred for ESD 112 cooperative program placement to have met Washington State Department of Health vaccination requirements for school attendance, or other legal requirements associated with the program in which they are enrolled, through the enrollment procedures of their referring school district.

ESD 112 shall allow for exemptions from immunization requirements only as allowed by law.

Life-Threatening Health Conditions

A life-threatening health condition means a condition that will put a child or youth in danger of death during the school day if a medication or treatment order providing authority to a registered nurse and nursing plan are not in place.

Prior to attendance in an ESD 112 program, the Superintendent shall require each child or youth with a life-threatening health condition to present a medication or treatment order addressing the condition. Following submission of the medication or treatment order, a nursing plan will be developed.

The Board directs the Superintendent to develop procedures to implement this policy.
